

# Guida all'architettura della piattaforma OpenCross

## INDICE

### Sommario

1. Architettura della modalità di autenticazione.....	2
2. Database e modello dati.....	3
3. Framework utilizzati e versioni.....	8
4. Architettura dei servizi esposti .....	8
5. Schema XSD pratiche SUE SUAP .....	19
6. Schema XSD Pratiche SUAP-ENTE per comunicazione con enti esterni.....	27
7. Esempio di ciclo di vita di una richiesta di funzionalità web .....	30

## PREMESSA

Opencross è un applicativo di gestione delle pratiche dei servizi “a sportello”, in grado di coordinare, attraverso un workflow, le transazioni tra tutti gli Attori coinvolti (Utenti, Intermediari, Comune, Enti Terzi). Opencross costituisce un ambiente web condiviso all'interno del quale, grazie ad una accurata gestione degli accessi e dei privilegi degli utenti, gli interessati possono gestire i propri adempimenti (gestione degli eventi, generazione ed invio delle comunicazioni, upload di documenti, firma, controllo scadenze, tracking della pratica, monitoraggio delle scadenze).

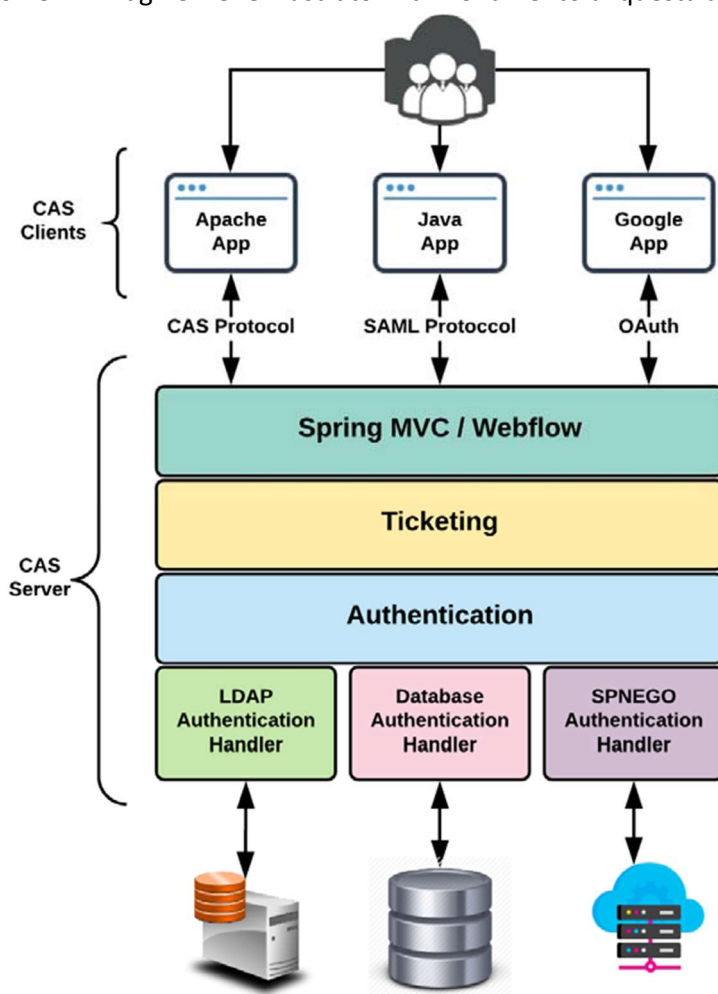

Opencross è nativamente integrato con il Front Office A&C garantendo la gestione completamente automatica delle pratiche, pur essendo un modulo indipendente dal punto di vista applicativo; consente in ogni caso il caricamento manuale delle informazioni.

Opencross interconnette, per ogni pratica SUAP, i backoffice di tutti gli Enti che partecipano alla gestione del Procedimento Unico e dei suoi endoprocedimenti.

## 1. Architettura della modalità di autenticazione

Il servizio di login dell'applicazione CROSS, ed il SSO (Single sign-on), è gestito dalla componente architetturale CAS (Central Authentication Service).

Di seguito nell'immagine viene illustrato il funzionamento di questa architettura:

La componente CAS client è configurata tramite la libreria jar presente nella web applicazione (cas-client-core-3.3.3).

Accedendo all'url <http://suapsuecross.collaudoavmtb/cross/>, il file web.xml dell'applicazione è configurato, in modo da effettuare la redirect sul modulo web CAS, che contiene la componente CAS server.

Di seguito la configurazione del file web.xml, che contiene la valorizzazione degli oggetti filter.

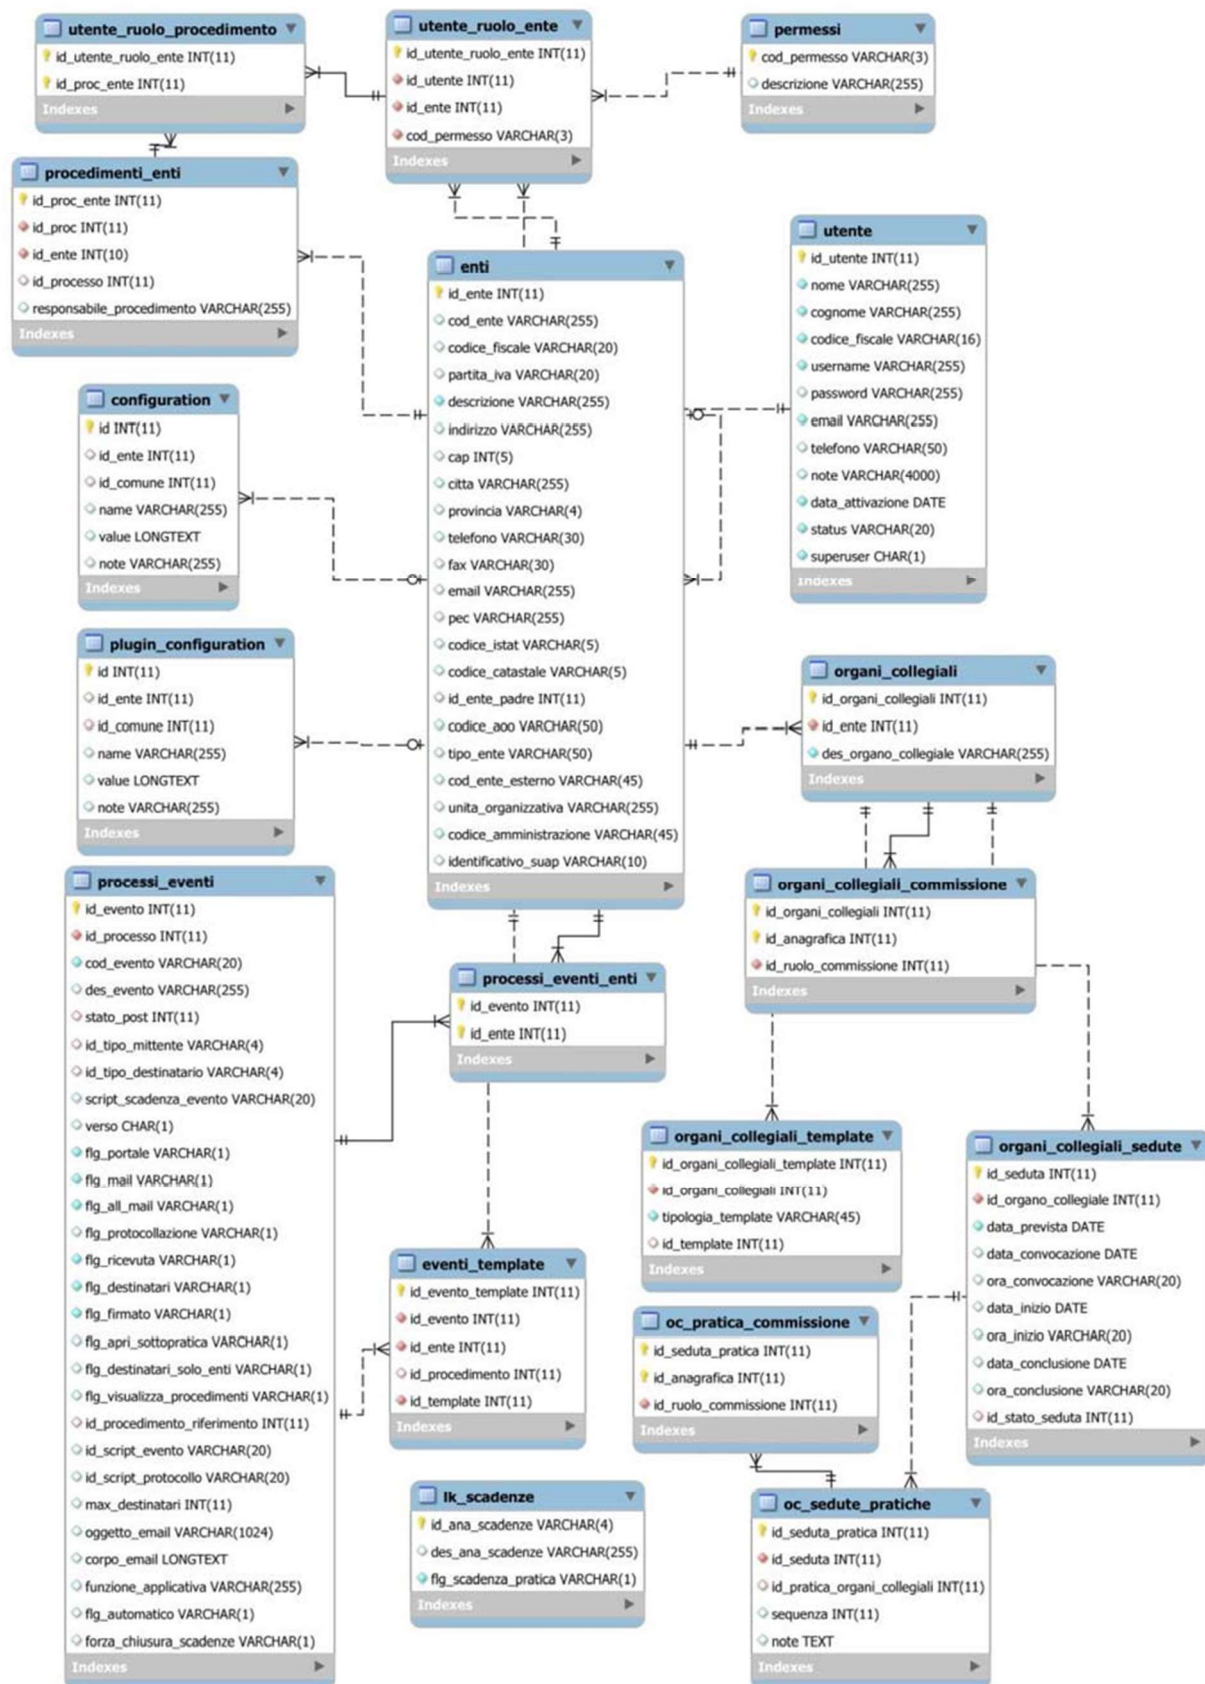

```
<filter>
  <filter-name>CAS Authentication Filter</filter-name>
  <filter-class>it.wego.utils.cas.CustomAuthenticationFilter</filter-class>
  <init-param>
    <param-name>casServerLoginUrlMap</param-name>
    <param-value>suapsuecross.collaudoavmtb http://suapsuecross.collaudoavmtb/cas/login</param-value>
  </init-param>
  <init-param>
    <param-name>serverNameMap</param-name>
    <param-value>suapsuecross.collaudoavmtb http://suapsuecross.collaudoavmtb </param-value>
  </init-param>
  <init-param>
    <param-name>ignorePattern</param-name>
    <param-value>recuperaPassword</param-value>
  </init-param>
  <init-param>
    <param-name>ignoreUrlPatternType</param-name>
    <param-value>CONTAINS</param-value>
  </init-param>
</filter>

<filter>
  <filter-name>CAS Validation Filter</filter-name>
  <filter-class>it.wego.utils.cas.CustomCas20ProxyReceivingTicketValidationFilter</filter-class>
  <init-param>
    <param-name>casServerUrlPrefix</param-name>
    <param-value>http://suapsuecross.collaudoavmtb/cas</param-value>
  </init-param>
  <init-param>
    <param-name>serverNameMap</param-name>
    <param-value>suapsuecross.collaudoavmtb http://suapsuecross.collaudoavmtb</param-value>
  </init-param>
  <init-param>
    <param-name>artifactParameterName</param-name>
    <param-value>ticket</param-value>
  </init-param>
  <init-param>
    <param-name>redirectAfterValidation</param-name>
    <param-value>true</param-value>
  </init-param>
</filter>
```

Una volta generato il ticket valido per la verifica dell'autenticazione, questa viene effettuata nel sistema che detiene le credenziali degli utenti, che nel caso in questione è un database MySQL.

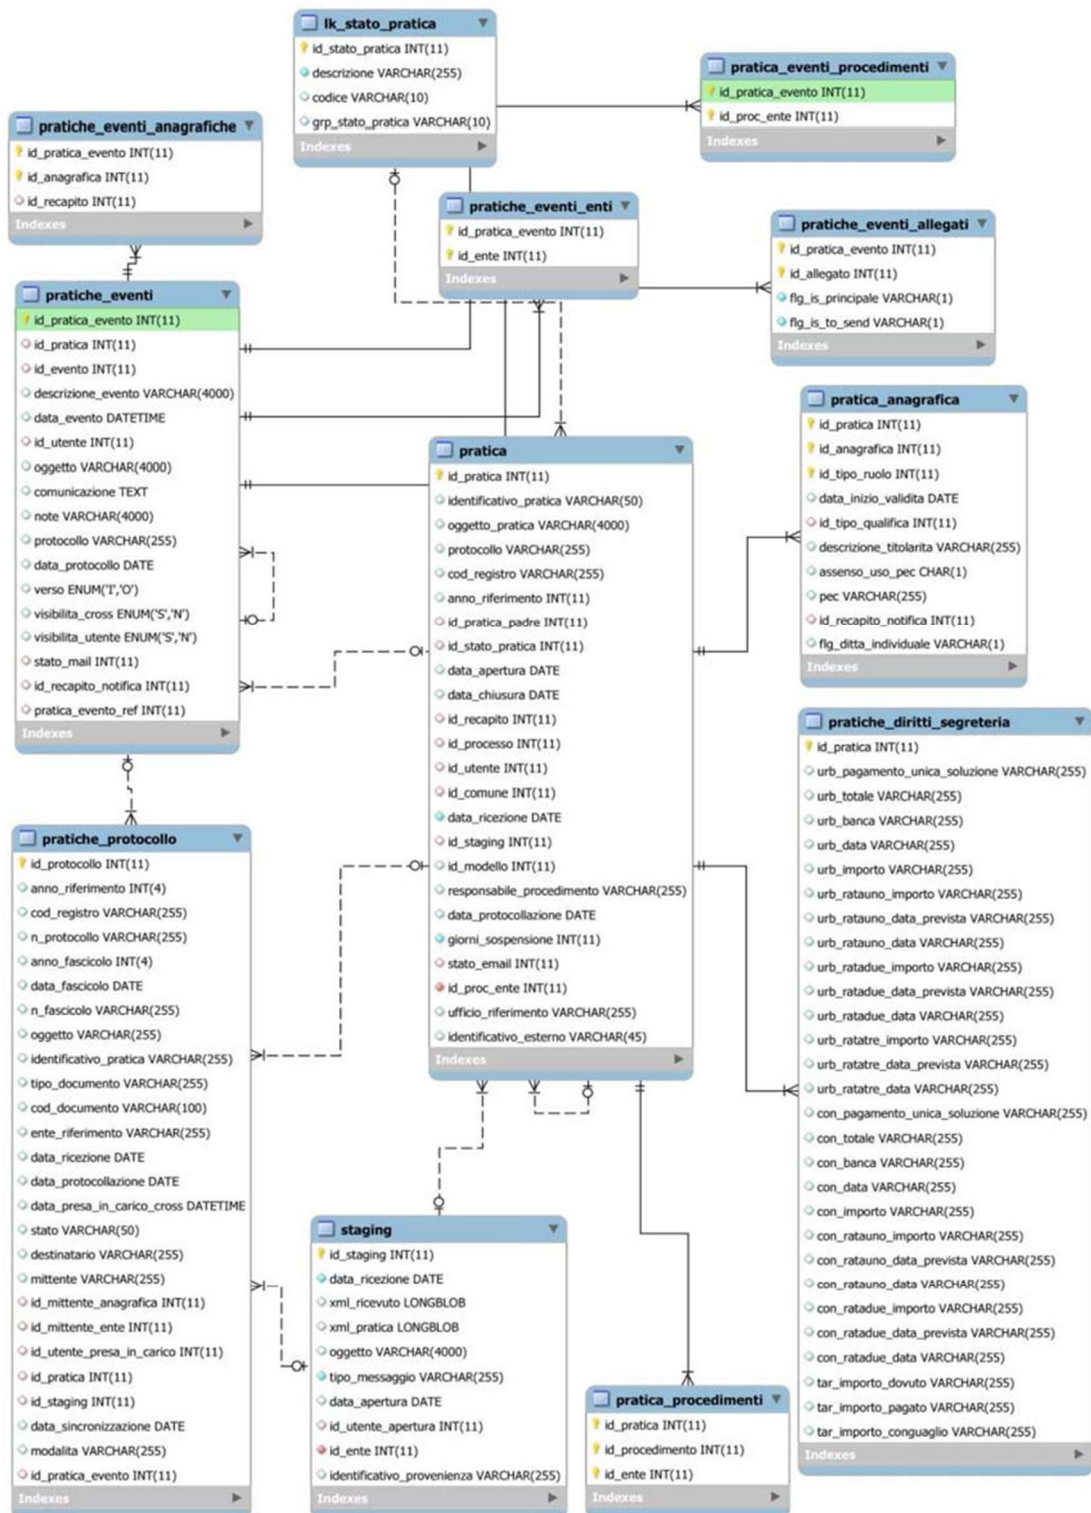

## 2. Database e modello dati

Opencross è configurabile per Ente, Procedimento, e Tipologia di Processo (Workflow) da associare alla pratica di competenza dell'Ente. Il database dell'applicazione è stato implementato su DBMS MySQL. Di seguito viene riportato il modello Relazionale del database realizzato (schema OPENCROSS):

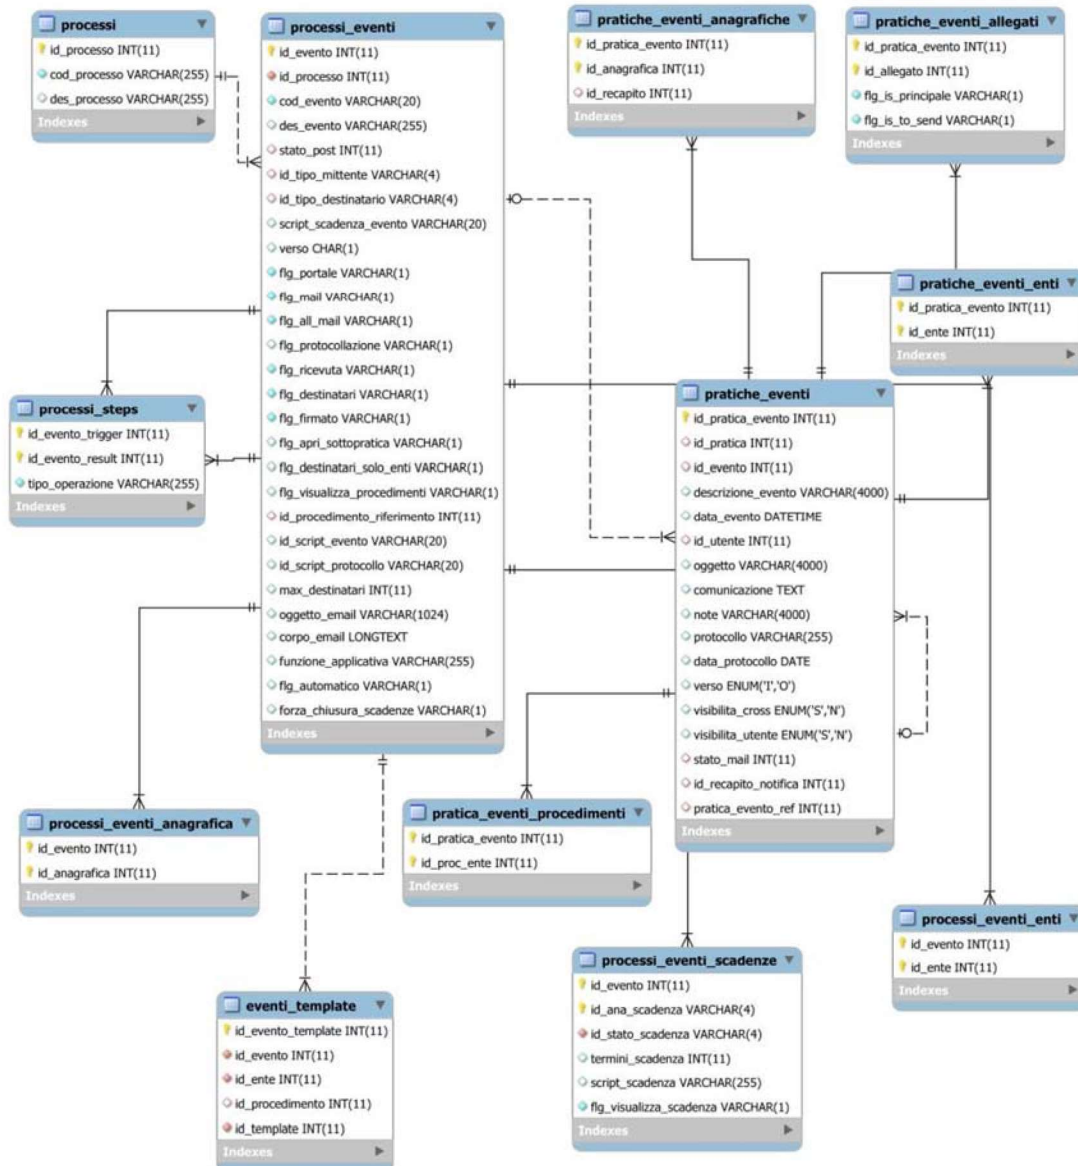

enti-procedimenti-processi-er

Opencross gestisce diverse tipologie di Anagrafiche in relazione alla pratica.

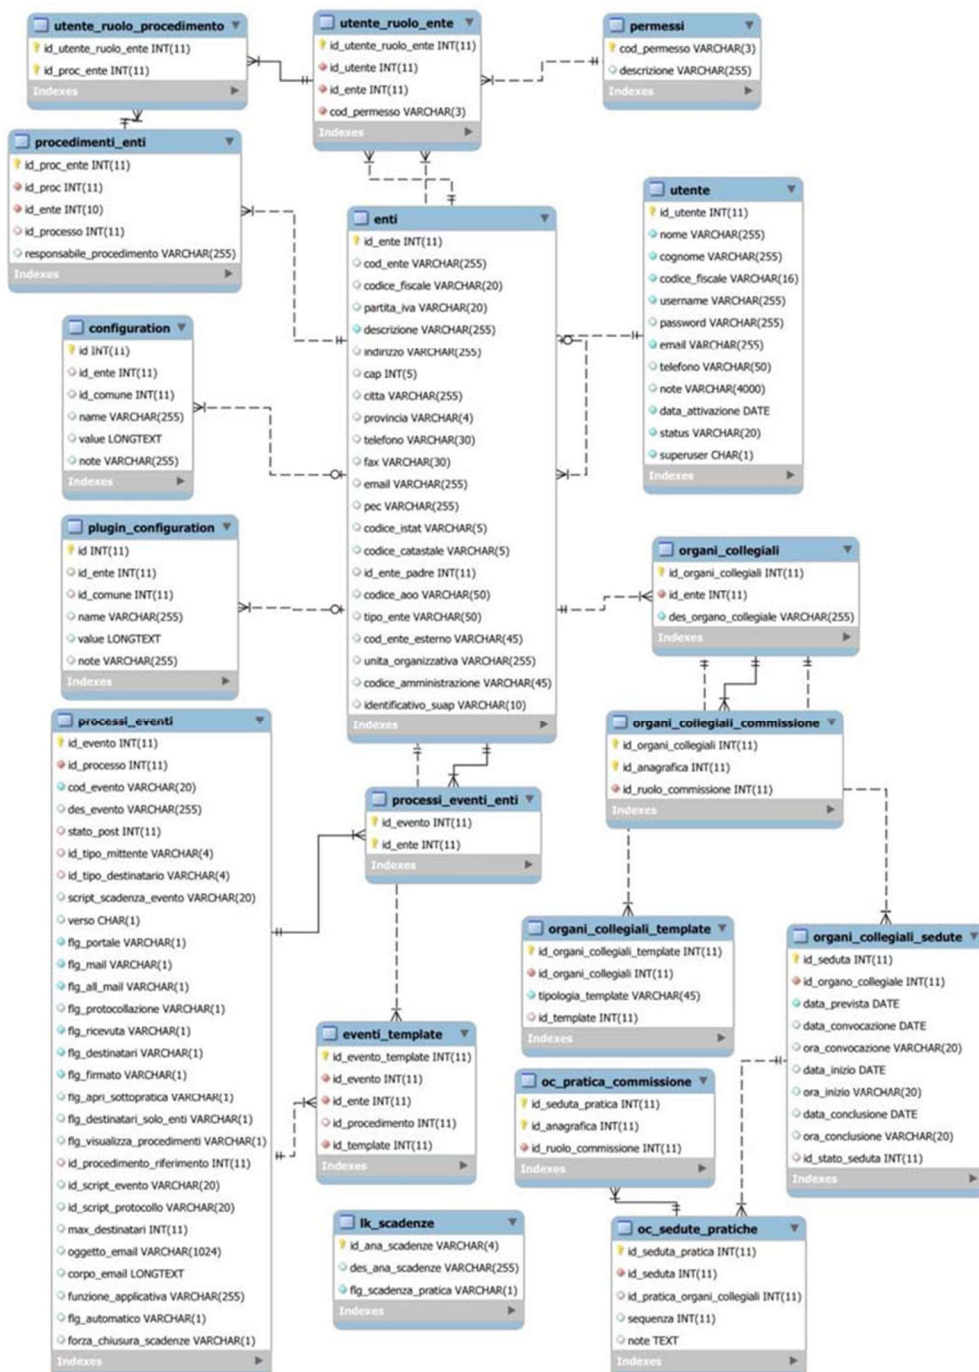

pratica-er

Opencross fornisce e traccia gli eventi / processi da mettere in atto per la gestione della pratica

Opencross fornisce la possibilità di profilare gli utenti, i plugin di integrazione con il protocollo , i parametri per la configurazione del MAIL SERVER , gli organi collegiali e le commissioni per la gestione della configurazione dei servizi.

enti-processi-relazioni enti-er

### 3. Framework utilizzati e versioni

Scopo del framework	Framework utilizzato	Versione	Link ufficiale di riferimento
Implementazione del pattern MVC	Springframework	3.1.1	<a href="https://spring.io/blog/2012/02/17/spring-framework-3-1-1-released">https://spring.io/blog/2012/02/17/spring-framework-3-1-1-released</a>
Implementazione del pattern DAO	Hibernate	4.2.0	<a href="https://hibernate.org/orm/releases/4.2/">https://hibernate.org/orm/releases/4.2/</a>
Gestione templates delle componenti view	Apache Tiles	2.2.2	<a href="https://tiles.apache.org/2.2/framework/index.html">https://tiles.apache.org/2.2/framework/index.html</a>
Esposizione di Web Service	Apache CXF	2.3.9	<a href="http://cxf.apache.org/apache-cxf-239-release-notes.html">http://cxf.apache.org/apache-cxf-239-release-notes.html</a>
Gestione del flusso BPMN 2.0	Activiti	5.15.1	<a href="https://www.activiti.org/userguide/">https://www.activiti.org/userguide/</a>
Gestione dei log applicativi	SLF4J	1.7.25	<a href="http://www.slf4j.org/docs.html">http://www.slf4j.org/docs.html</a>
Generazione di documenti	itextpdf	5.5.2	<a href="https://itextpdf.com/en/resources/releases/release-itext-552">https://itextpdf.com/en/resources/releases/release-itext-552</a>

### 4. Architettura dei servizi esposti

I web service esposti da parte della piattaforma CROSS, sono realizzati secondo l'architettura SOAP ed implementati con la tecnologia Apache CXF.

Attraverso l'URL <http://suapsuecross.collaudoavmtb/cross-ws/services> è possibile vedere l'elenco dei servizi esposti. Di seguito l'elenco:

Available SOAP services:	
<b>AggiornaSuapSoap</b> • Aggiorna	Endpoint address: <a href="http://suapsuecross.collaudoavmtb/cross-ws/services/AggiornaSuap">http://suapsuecross.collaudoavmtb/cross-ws/services/AggiornaSuap</a> WSDL : <a href="http://italysolution.com/Suap/AggiornaSuap">http://italysolution.com/Suap/AggiornaSuap</a> Target namespace: <a href="http://italysolution.com/Suap">http://italysolution.com/Suap</a>
<b>CripralPraticheService</b> • getPraticaDetail • getPraticheList	Endpoint address: <a href="http://suapsuecross.collaudoavmtb/cross-ws/services/CripralPraticheService">http://suapsuecross.collaudoavmtb/cross-ws/services/CripralPraticheService</a> WSDL : <a href="http://www.wego.it/cross/CripralPraticheService">http://www.wego.it/cross/CripralPraticheService</a> Target namespace: <a href="http://www.wego.it/cross">http://www.wego.it/cross</a>
<b>CrossServices</b> • inserisciEvento • getListaEventi	Endpoint address: <a href="http://suapsuecross.collaudoavmtb/cross-ws/services/CrossServices">http://suapsuecross.collaudoavmtb/cross-ws/services/CrossServices</a> WSDL : <a href="http://interoperability.cxf.webservices.cross.wego.it/1/CrossServicesImplService">http://interoperability.cxf.webservices.cross.wego.it/1/CrossServicesImplService</a> Target namespace: <a href="http://interoperability.cxf.webservices.cross.wego.it/">http://interoperability.cxf.webservices.cross.wego.it/</a>
<b>CrossWSService</b> • process	Endpoint address: <a href="http://suapsuecross.collaudoavmtb/cross-ws/services/CrossService">http://suapsuecross.collaudoavmtb/cross-ws/services/CrossService</a> WSDL : <a href="http://webservice.backend.people.it/1/CrossWSServiceService">http://webservice.backend.people.it/1/CrossWSServiceService</a> Target namespace: <a href="http://webservice.backend.people.it/">http://webservice.backend.people.it/</a>
<b>PeoplePratiche</b> • process	Endpoint address: <a href="http://suapsuecross.collaudoavmtb/cross-ws/services/PeoplePraticheService">http://suapsuecross.collaudoavmtb/cross-ws/services/PeoplePraticheService</a> WSDL : <a href="http://webservice.backend.people.it/1/PeoplePraticheService">http://webservice.backend.people.it/1/PeoplePraticheService</a> Target namespace: <a href="http://webservice.backend.people.it/">http://webservice.backend.people.it/</a>
<b>RicercaPratiche</b>	Endpoint address: <a href="http://suapsuecross.collaudoavmtb/cross-ws/services/RicercaPraticheService">http://suapsuecross.collaudoavmtb/cross-ws/services/RicercaPraticheService</a> WSDL : <a href="http://ricercapratiche.cxf.webservices.cross.wego.it/1/RicercaPraticheService">http://ricercapratiche.cxf.webservices.cross.wego.it/1/RicercaPraticheService</a> Target namespace: <a href="http://ricercapratiche.cxf.webservices.cross.wego.it/">http://ricercapratiche.cxf.webservices.cross.wego.it/</a>

#### Elenco servizi esposti

#### WSDL servizio AggiornaSuapSoap

## 6. Schema XSD Pratiche SUAP-ENTE per comunicazione con enti esterni

Nell'ambito della comunicazione con enti esterni, viene composto un file xml, vedi paragrafo 4.10 del documento "MAN\_UTENTE\_suap\_sue\_BACK-OFFICE.pdf" che segue le regole del seguente descrittore XSD del modello di cooperazione tra SUAP e altre pubbliche amministrazioni SUAP-ente-1.1.0.xsd) come da specifiche tecniche per il regolamento di cui all'art. 38 del D.L. 112/2008.

```

## 7. Esempio di ciclo di vita di una richiesta di funzionalità web

I seguenti passaggi servono per esplicitare i passaggi di implementazione, necessari ad effettuare una modifica di una funzionalità web, e mostrano l'interazione delle componenti architetturali.

Architettura tipica BO:

PAGINA -> CONTROLLER -> ACTION -> SERVICE -> DAO

Esempio funzionamento pagina di ricerca e griglie:

Si parte dalla jsp in cui si vuol effettuare la modifica: per modificare il menù andare in:

`\backoffice\cross\cross-web\src\main\webapp\themes\default\views\main\header.jsp`

Il css che è agganciato al menù è:

`\backoffice\cross\cross-web\src\main\webapp\themes\default\css\main.css`

Il properties che contiene la label del menu è:

`\backoffice\cross\cross-web\src\main\resources\locales\messages-menu.properties`

Si è scelto di operare nel Controller:

`\backoffice\cross\cross-web\src\main\java\it\wego\cross\controller\Pratiche.java`

La gestione della redirect dopo la fine del controller viene fatta al ready della pagina di atterraggio e quindi viene rimbalzato il flusso in un nuovo controller che popolerà griglia e dati di un eventuale filtro.

Nel dettaglio questa redirect funziona così:

nella pagina gestione.jsp in riga 66 c'è il metodo getUrl (Javascript) che costruisce l'url mappato nel controller partendo dall' url corrente e sostituendo gestisci.htm con gestisci /ajax.htm

In questo metodo "AJAX" si deve creare il Json secondo la struttura della griglia (definita in un file .js) per popolare la table di frontend presente nella pagina gestione.jsp

#### Requisito aggiunta campo riepilogo - flusso

Dalla pagina di griglia si va nel dettaglio della singola pratica:

la tiles corrispondente è

`\backoffice\cross\cross-web\src\main\webapp\themes\default\views\main\body\pratiche\views.xml`

*name = pratica\_dettaglio* contiene tutte le pagine di riferimento per il dettaglio: body + tab

La pagina corrispondente che contiene il riepilogo della pratica è

*\backoffice\cross\cross-web\src\main\webapp\themes\default\views\main\body\pratiche\dettaglio.jsp*
